Introduction

This purpose of this guide is to assist people within the Australia international education industry to understand the scope of the publicly available International Student Data released by Australian Education International (AEI). The guide will also provide information on how to manipulate the data using the Pivot Table supplied on the AEI website.

The data provide an up to date time series from 2002 onwards of onshore enrolments by international students studying in Australia on a student visa. The data are able to be manipulated at either a Basic Level (available to all, without charge) or at a Standard and Detailed Level (available only to AEI Market Information Package (MIP) subscribers only). This Guide uses references to the publicly available Basic Level data. New data, by enrolments and commencements, are generally available within 6 weeks of the end of a reporting month.

This guide was developed by the International Research and Analysis Unit (IRAU) within AEI.

Prerequisites

To manipulate the AEI Pivot Table effectively, a working knowledge of Microsoft Office Excel 2003 is assumed. The Pivot Table will work on earlier versions of Excel, but not all options will be available.

While the Pivot Table is supported by Apple Macintosh some of the functionality will be different.

Note as AEI will continue to improve the operability of the Pivot Table as opportunities are identified, some detail, both in content and examples used, may change.

Guide objectives

Once you have completed this guide you should:

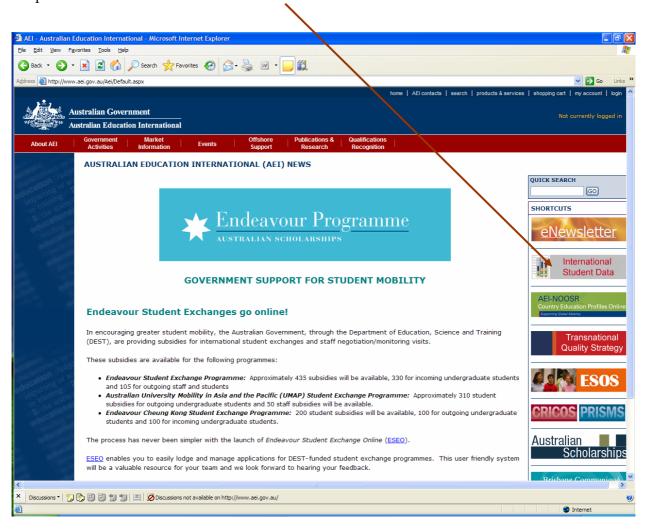

- Be able to find the data on the AEI website;
- Understand the source of the data;
- Understand how the data are derived;
- Feel confident to extract data from the AEI Pivot Table provided on the website; and
- Be aware of the various AEI statistical products.

The AEI website

Before you start to use the AEI data, it would be helpful to familiarise yourself with the range of statistical information available on AEI Online – the AEI website (www.aei.dest.gov.au). This website is AEI's vehicle for disseminating market intelligence, which includes the range of AEI statistical material. You may already use this site regularly, and if so, you may wish to skip this section of the guide. However, the part of the website that hosts the statistics, also hosts other information about the data.

Navigating your way to the AEI data

The screenshot below is the AEI online home page (as at September 2007). While there are a number of ways to access AEI International Student Enrolment Data from the website, the simplest is to click on the 'International Student Data' shortcut button:

From the AEI statistics main page, the user can access a range of AEI statistical material:

- the International Student Data;
- the Research Snapshots;
- the Market Data Snapshots; and
- other useful research material.

Go direct to the "What's New" link for fast connection to the most recent Pivot Table.

International Student Data

From the International Student Data page

link, the user can access a range of material.

This includes:

• The Monthly Summaries of International Student Data issued with the enrolment data.

Other AEI Research papers on AEI student er

Discussions * | 📆 🐧 🗒 🚭 🐩 🏥 💋 D

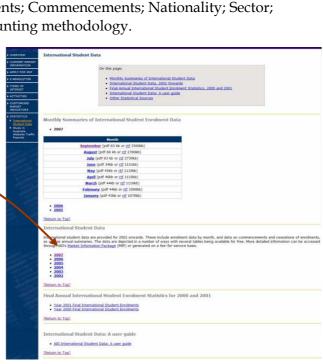

English Australia Survey of Major ELICOS Regional Markets

tutive Summary of the English Australia (EA) report on its annual ad is available through the following links:

• *International Student Data* provides detailed data (from 2002 onwards) by a range of variables including Nationality, State, Sector and Month.

Other material is accessible through the hyperlinks. The Explanatory Notes include information on the source of the data; Enrolments; Commencements; Nationality; Sector; Provider type; level and field of study; and counting methodology.

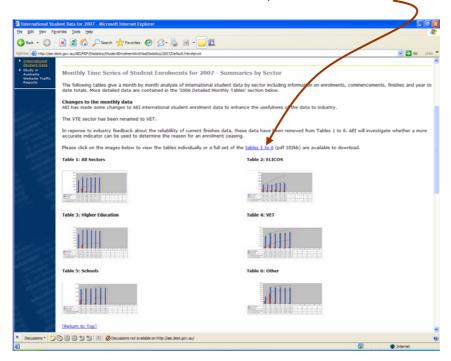

The enrolment data are accessed on the *International Student Data* page by **clicking on the year of interest**. With other material the data are displayed in a number of options, as Pivot Tables, some Basic and others, Detailed.

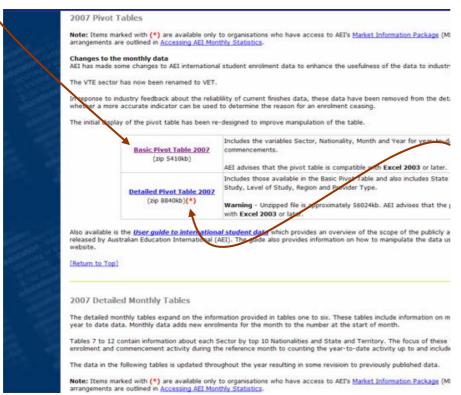

Monthly Time Series of Student Enrolments - Summaries by Sector

These tables give a month by month analysis of international student data by sector. It includes information on enrolments and commencements for each month of the current year by each education sector. These are tables 1 to 6, available for free.

Pivot Tables

The <u>Basic Pivot Table</u> is available for free. It contains a limited number of variables, but provides sufficient information to understand the major trends in Australia's international education enrolments and commencements since 2002.

The <u>Detailed Pivot Table</u> contains additional variables, and access is restricted to those who subscribe to the Market Information Package (MIP).

A series of Tables 13 to 26 in monthly tables, pdf format are (Tables 7 to 12 in available to MIP pdf format) are subscribers only. available for free. resource. A sample data set zip 5300kb) is available for use with this guide. For users information and advice, or contact AEL. MICROSOTT EXCEL 2000 or earlier, please refer to the guide for further [Return to Top] 2007 Detailed Monthly Tables The detailed monthly table expand on the information provided in tables one to ax. These tables include information on monthly enrolments, commencements and year to date data. Monthly data adds new enrolments for the month to the number at the start of month. Tables 7 to 12 contain information about each Sector by top 10 Nationalities and State and Territory. The focus of these tables has changed from counting the enrolment and commencement activity during the reference month to counting the year-to-date activity up to and including the reference month. The data in the following tables is updated throughout the year resulting in me revisioin to previously published data Note: Items marked with (*) are available only to organisations who have access to AEI's Market Information Package (MIP). For non-MIP clients access arrangements are outlined in Accessing AEI Monthly Statistics. Tables 13 to 26 in Excel format are also available to MIP subscribers only.

Using the Pivot Table: AEI International Student Data

The Excel Pivot Table

The Pivot Table is a data analysis tool that allows the user to create customised multidimensional views of the data by dragging and dropping variables into and out of a table.

This section has used material available in:

http://office.microsoft.com/en-us/excel/HA010346321033.aspx?pid=CH010714011033 as at May 2008. The site provides self-paced tutorials for interested users.

AEI Pivot Tables available on the website

AEI have available three pivot tables of international student data. They are:

- (i) Basic Pivot Table;
- (ii) Standard Pivot Table
- (iii) Detailed Pivot Table.

The "Basic" table is available for free and the latter two are by MIP subscription only.

Basic Pivot Table

Available from this table are enrolment and commencement data by Year (from 2002) by Month, by Sector and by State.

Standard Pivot Table

Items available include those from the *Basic* version with the additional of: 'Region', 'Level of Study', 'Broad Field of Education¹' and 'Provider Type'.

Detailed Pivot Table

Items available include those from the *Standard* version with the additional of: 'Narrow Field of Education¹' and 'Detailed Field of Education¹'.

A full list of all data categories and variables available in the AEI pivot tables are at **Attachment 1**.

¹ 'Field of Education' is available in AEI data at the Broad, Narrow and Detailed level. The item is based on the 'Australian Standard Classification of Education (ASCED), 2001' (*ABS Catalogue No. 1272.0*). The "Broad" level refers to the two-digit level of the classification; the "Narrow" level refers to the four-digit level of the classification; and the "Detailed" level refers to the six-digit and finest level available from the classification. For full details, refer to the classification available for free from the ABS website at www.abs.gov.au.

Structure of a Pivot Table

If you are not familiar with the specific terms used to identify the parts of a Pivot Table report, you may find it useful to read this section for a quick overview.

- Page area: The placement of a variable in this area will enable you to filter the displayed table by individual categories of that variable. For example, if you used State as a page field, you can select an individual State (eg. NSW), thereby displaying summarised data for that state or territory in the Pivot Table report.
- Data area: The area where you assign the 'population' to be displayed in the table. It is critical to remember that <u>only items that start with 'DATA' are placed in the Data area</u>. For example, YTD Enrolments is a data field.
- Row area: The categories of a variable placed in the row area will appear as rows in the Pivot Table report.
- Column area: The categories of a variable placed in the column area will appear as columns in the Pivot Table report. It is best to restrict the use of the column area only to variables with a smaller number of categories, eg. year, state, provider type.

While any variable can be placed in any area, due to the number of categories within some variables, some thought needs to be given to the placement of an item. For example, given there are just over 200 nationalities, it is best to display Nationality in the row area if you want to show all nationalities. However, if you want to show an individual nationality, you can place Nationality in the page area and restrict your report by selecting the nationality in question using the drop-down selector.

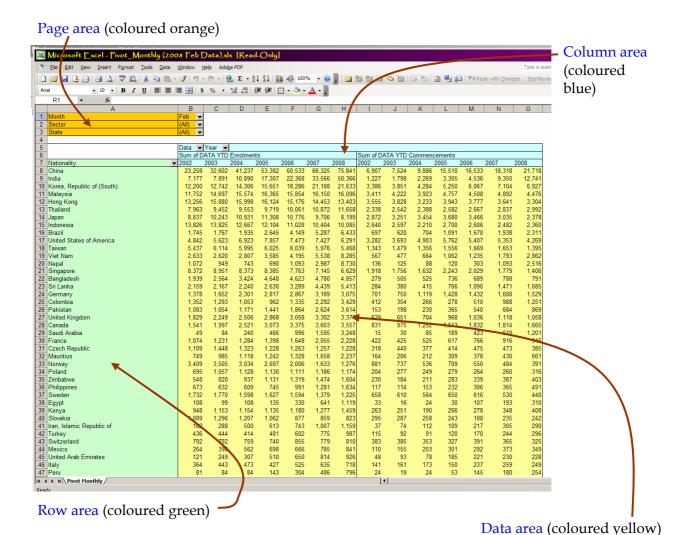

By manipulating the data, the user can create a customised report.

At first glance the level of detail in a Pivot Table can appear overwhelming. However, users can choose to drill down into a single aspect of the data, or pull back for an overview of an entire sector. Users can also customise their view of the data by:

- Adding or removing data variables;
- Rearranging the layout; and
- Using page fields to view a subset of the data.

A survival guide

When opened, the AEI Basic Pivot Table looks like this (colour coded in this example only):

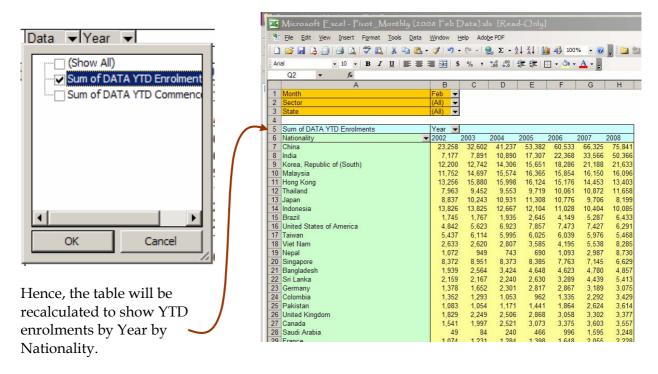

The *Basic Pivot Table* International Student Data (YTD February 2008 pivot table is used in this example) offers two types of AEI Data:

- Sum of data of year to date (YTD) enrolments; and
- Sum of data of YTD commencements.

The *Basic Pivot Table* can be manipulated to display enrolment and commencement data on a year to date basis by Month, by Sector and by State. Remember that once you start making changes, it is not always easy to reverse them. An easier option may be to close your pivot table without saving and reopen the pivot table you have downloaded from the AEI website and start again.

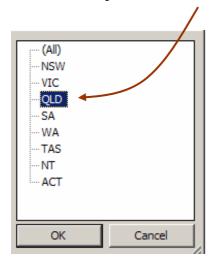

Selecting data type

For your interrogation of the data, you may decide to show only enrolments - click the down arrow next to variable "Data", de-select 'Sum of DATA YTD Commencements', then click 'OK'.

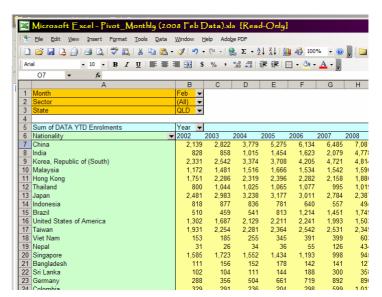

Filtering the display of data

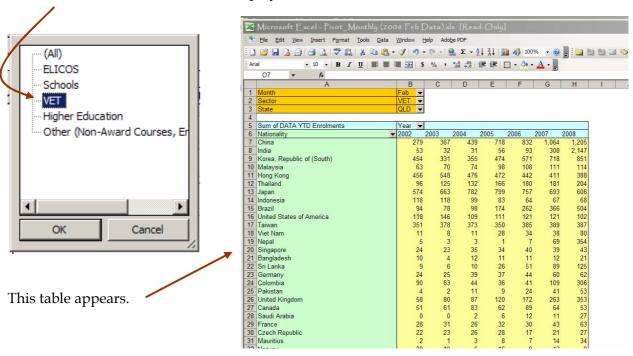

You can filter or 'restrict' the data you wish to display in your table. This is best achieved by placing the variable you wish to use into the page area, then selecting the category from that variable you wish to restrict the data to. For example, if you wish to generate a table of enrolments in Queensland, you need to ensure the variable "State" is in the page field, then click on the drop arrow and select QLD, then click OK.

This leads to a more restricted table showing YTD enrolments by Year by Nationality for Queensland.

If required, the data could then be further restricted to show only Queensland enrolments in the VET sector, for example. To do this, click the down arrow next to the "Sector" variable and select VET. This restricts the data displayed in the table to the Queensland VET sector.

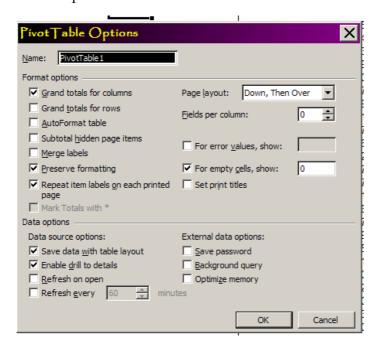

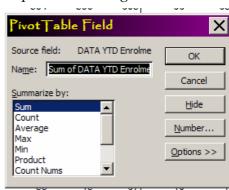

The Pivot Table menu

Right-clicking on any cell in the data area calls up a number of options including:

Field Settings

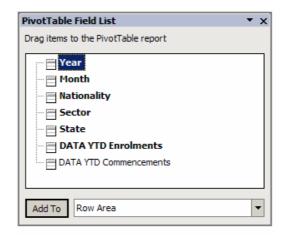

Show Field List

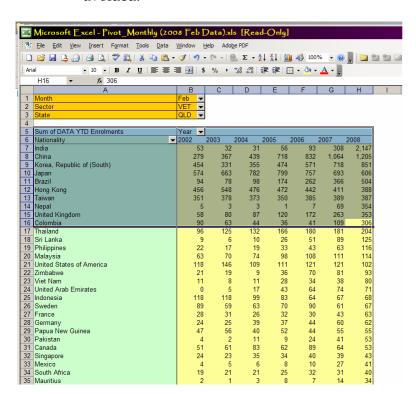

The 'show field list' brings up the list of all variables and data items available in the pivot table. Note that items already used (or included) in the table appear bolded.

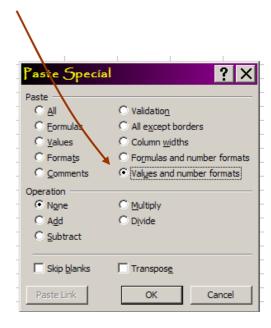

Copying the Pivot Table output to an Excel spreadsheet

The key steps are:

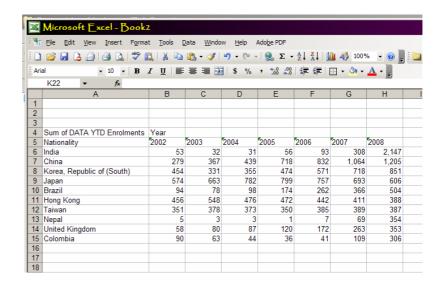

- 1. Using the mouse, select by clicking and painting over the data cells and headings you want (shaded grey in the graphic below), then copy your selection into the Clipboard by either using Ctrl-C (on your keyboard) or selecting Edit-Copy on the Excel menu bar.
- 2. Open a new workbook (by using the 'New' workbook icon on the Excel menu bar).
- 3. Click in any cell in the new workbook, and then from the Excel menu bar, use the command 'Edit-Paste Special', then select 'Values and number formats' in the radio button and click OK. Using the normal paste command 'Edit-Paste' or Ctrl-V is to be avoided.

The new spreadsheet with the copied data can be manipulated further to:

- create a chart using Chart Wizard;
- make calculations, eg. proportions, percentage change, etc; or
- formatting before inserting into a document such as a report.

Other useful data

Research and Market Data Snapshots

The Research Snapshot series was developed to provide stakeholders with one-page summary updates on current activities and developments in international education data and research. The series provide examples of the ways in which Detailed Pivot Table data can be manipulated to meet an individual users needs.

Similarly, Market Data Snapshots present a one-page summary of market-specific data together with local insights from AEI's International Network to help explain trends in enrolment data from overseas markets.

Research papers

A number of research papers have been developed by AEI to provide international education industry stakeholders with the findings of more detailed analysis of AEI's international student database.

Data categories available from AEI pivot tables

The following are descriptions of the data categories included in the standard AEI monthly pivot tables.

YTD Enrolments

The running total of international student enrolments for the calendar year, eg. YTD Enrolments to September 2006 is the total of the enrolments for each month from January 2006 to September 2006.

YTD Commencements

The running total of international student commencements for the calendar year, eg. YTD Commencements to March 2005 is the total of the commencements for each month from January 2005 to March 2005.

As at 1st Month

The number of international student *enrolments* as at the first day of the month.

Enrolments for Month

The total number of international student enrolments in the month. This is the sum of enrolments at the 1st of month plus commencements for the month.

Commencements for Month

The number of international student commencements during the month.

Note: An **enrolment** is a count of any student enrolments in a discrete course of study and includes ongoing students. A **commencement** is a count of new student enrolments in a discrete course of study (and hence a component of the total count of all enrolments) at a particular institution.

Details of data variables available from AEI pivot tables
